

## **4 QUALITY EDUCATION – Niklas Nöstlthaller**

What is it about? It is about quality education, ensuring inclusive and equitable quality education and promoting lifelong learning opportunities for all, no matter where they live. The goal is about making education possible for each of us. Education is the key prosperity and opens a world of opportunities. In order to do that, education is a very important part in everyone's lives and helping to make our world a more sustainable place.

My project is about helping poorer people in Africa. Many children in Africa don't go to school because they can't afford things like pens or paper or have to help earn money for their families. In order to help and change things, I have decided to start a project. Every Tuesday morning, I would go through the school and try to collect school materials that are no longer needed, but still ok to use. It is really amazing how many useful things can be collected in this way. After every school year, when I have collected thousands of pens or books, I can travel to Rwanda, a small and poor country in the middle of the African continent. In Rwanda, there are lots of small villages that urgently need help. The people are really nice and really grateful, and I'm always a bit proud of myself, when I come home from the travel. For sure there are many possibilities to support the project: for example, you can come in my school and donate some things, which are no longer needed. Or you donate some money. All these things help to make the world a bit better and fairer.
